The R-type from Elite offers flexibility for your gardening space. The R-type can fit into your garden set-up through the removal of the framework's rear end thus allowing it to become an integral part of a wall, shed or garage.

The important consideration with the freestanding R-type is the apex width, the section of the framework which will attach to your designated area, which is governed by the width of any of our freestanding models. Once you have chosen your desired R-Type, it can then be made to any required length from the wall and the standard features available to the traditional model will then apply.

Many accessories available please visit our website for more details.
